NEW SERVICES – SaaS!

Palmetto, Florida– September 1, 2008

Dynamic Global Solutions (DGS), a Florida Limited Liability Company, is pleased to announce additional services. Operating as an independent service organization, DGS provides customized and personalized solutions to the financial services industry. In its continuing efforts to meet our client needs, we have developed the expertise and network of professionals to provide the following services:

Software as a Service (SaaS) Analysis and Project Management

DGS is excited to be part of the evolution of SaaS. As one of the fastest growing segments of the Information Technology industry, SaaS can often provide companies with cost effective solutions to managing diverse applications. DGS can help identify solutions and analyze providers that best address a company's needs. This may include RFP management as well as onsite management presentations – always customized!

Software as a Service (SaaS) Support

For our clients that have already made the decision to implement a SaaS application, DGS can help baseline processes for implementation, manage conversion projects and provide post implementation support. If we do not currently have the SaaS provider expertise, we will get it!

Current SaaS application knowledge:
